Chowdhury Abdulla Nasir

Tsukuba, Japan • s2620717@u.tsukuba.ac.jp • abdullah-nasir-chowdhury.github.io • GitHub • LinkedIn

Research interests: 3D computer vision, point cloud understanding, robustness and distribution shift, synthetic-to-real transfer, statistical evaluation of deep learning models.

Education

University of Tsukuba *Tsukuba, Japan*
M.Sc. in Computer Science, Apr. 2026 – Mar. 2028 (expected) *(Research Student, Apr. 2025 – Mar. 2026)*
Computer Vision Laboratory

Leading University *Sylhet, Bangladesh*
B.Sc. in Electrical and Electronic Engineering, 2019 – 2023 • CGPA 3.93 / 4.00

Research Experience

Graduate Researcher, Computer Vision Laboratory, University of Tsukuba *Apr. 2025 – Present*

- Benchmarked 10 point cloud classification architectures across 5 domains under pose, noise and occlusion, using confirmatory hypothesis tests; showed that rotation-invariant designs are the most pose-robust but rank among the least noise-robust in 4 of 5 domains. First-author paper accepted at WACV 2027.
- Showed that standard backbones trained with a simple invariance loss finish within 2.5 percentage points of rotation-invariant ones on unseen corruptions, by retraining all 10 architectures with 3 seeds each.
- Reached 0.957 point AUROC on pre-registered Real3D-AD scans and 78–81% category-mean object AUROC over 597 objects, with no training on the benchmark, using one-class subspaces of registered templates on frozen features for synthetic-to-real surface inspection. First-author paper accepted at the ACCV 2026 Workshop on Subspaces in the Era of Foundation Models.

Research Assistant, Intex Research Lab *Sylhet, Bangladesh · 2024 – 2025*

- Annotated and labelled Bangla characters and words for the Bangla CrossHair dataset and benchmarked PyTesseract and EasyOCR on it; first-author paper published in IEEE Xplore.

Research Assistant, EARL Research Network *Sylhet, Bangladesh · 2021 – 2023*

- Prototyped and simulated a real-time GPS and PTS architecture; first-author paper published at QPAIN 2025 (IEEE Xplore).

Selected Publications

- **A.N. Chowdhury** et al. *Do We Still Need Rotation-Invariant Architectures? A Statistical Robustness Benchmark for Point Cloud Classification.* WACV 2027 (Datasets Track), accepted. arXiv:2611.03952
- **A.N. Chowdhury** et al. *Subspace Representations for Synthetic-to-Real Transfer in 3-D Surface Inspection.* ACCV 2026 Workshop on Subspaces in the Era of Foundation Models, accepted. arXiv:2611.02744
- Two earlier first-author papers in IEEE Xplore (2025) on Bangla OCR and real-time GPS tracking. Full list on my homepage.

Software & Projects

pcrobust (PyPI, MIT License) *2026*

- Python library for robustness evaluation of point cloud classifiers: corruption generators, 10 architectures, the statistical pipeline and 193 trained checkpoints, with a command that rebuilds the WACV 2027 paper's tables. Archived on Zenodo.

Real-Time Detection & Tracking *2026*

- Multi-object tracking pipeline with YOLO11 and ByteTrack, exported to ONNX and TensorRT with a measured CPU vs. GPU latency benchmark; includes a per-worker PPE compliance demo. Deployed on Google Cloud Run.

Point Cloud Inspection API *2026*

- Unsupervised 3D defect detection service needing no labelled defects: FPFH descriptors matched against a FAISS memory bank of defect-free parts, served with FastAPI in Docker and benchmarked on MVTec 3D-AD.

Skills

- **Languages:** Python, C/C++, MATLAB
- **ML / Computer Vision:** PyTorch, scikit-learn, OpenCV, Open3D, FAISS, ONNX, TensorRT
- **Systems & Tools:** Linux, Git, Docker, FastAPI, Google Cloud Run
- **Statistics:** Hypothesis testing, ANOVA, effect-size analysis, experimental design
- **Spoken languages:** English (IELTS 8.0, CEFR C1), Japanese (JLPT N4, conversational)
